Listing of Claims:

This listing of claims will replace all prior versions, and listings, of claims in the application.

- 1 1. (Previously presented) A transmitter for use in optical communication
2 system, said transmitter comprising
3 a means for generating a stream of RZ optical pulses in which
4 alternate ones of such pulses have essentially orthogonal
5 polarizations, and
6 a means for modulating the phases of said optical pulses as a
7 function of input data applied to said transmitter thereby
8 encoding said input data onto said stream of RZ optical pulses,
9 wherein said modulating means is a Differential Phase Shift Keying
10 (DPSK) modulator.
- 1 2. (Cancelled) The invention defined in claim 1 wherein said modulating
2 means is a phase shift keyed (PSK) modulator.
- 1 3. (Cancelled) The invention defined in claim 1 wherein said modulating
2 means is arranged to modulate said optical pulses in accordance with
3 the differences between successive bits in the said input data.
- 1 4. (Previously presented) A transmitter for use in optical communication
2 system, said transmitter comprising
3 a means for generating a first and a second stream of RZ optical
4 pulses in which pulses in said first stream have essentially
5 orthogonal polarizations with respect to pulses in said second
6 stream, and

Appl.No. 09/990,965

7 means for modulating the phase of said optical pulses in said first
8 and second streams as a function of first and second streams of
9 input data applied to said transmitter, respectively, thereby
10 encoding said first and second streams of RZ optical pulses,
11 wherein said modulating means is a Differential Phase Shift Keying
12 (DPSK) modulator.

1 5. (Original) The invention defined in claim 4, wherein the said first and
2 second stream of optical pulses each have same first wavelength, and
3 wherein said transmitter further includes a wavelength division
4 multiplexer for combining the output of the said modulation means with
5 at least a second modulated optical signal having a wavelength
6 different from said first wavelength.

1 6. (Original) The invention defined in claim 4, wherein said optical pulses
2 are solitons.

1 7. (Previously presented) An optical communication system arranged to
2 transmit at least one stream of input data from a transmitter to a remote
3 receiver, said system comprising
4 a transmitter for generating a stream of RZ optical pulses in which
5 alternate ones of such pulses have essentially orthogonal
6 polarizations, and for modulating the phase of said optical pulses
7 as a function of said input data applied to said transmitter
8 thereby encoding said input data onto said stream of optical
9 pulses, wherein said modulation is in a Differential Phase Shift
10 Keying (DPSK) modulation format, and

Appl.No. 09/990,965

Reply to Office Action of February 27, 2006

11 an optical communication channel for transmitting the phase
12 modulated optical pulses from said transmitter to said remote
13 receiver.

1 8. (Original) The invention defined in claim 7 wherein said system further
2 includes a demodulator for recovering said at least one stream of input
3 data from said modulated optical pulses at said remote receiver.

1 9. (Previously presented) A method for transmitting input data using an
2 optical communication system, said method comprising the steps of
3 generating a stream of RZ optical pulses in which alternate ones of
4 such pulses have essentially orthogonal polarizations, and
5 modulating the phases of said optical pulses as a function of said
6 input data thereby encoding said input data onto said stream of
7 RZ optical pulses,
8 wherein said modulation is in a Differential Phase Shift Keying
9 (DPSK) modulation format.

1 10. (Cancelled) The invention defined in claim 9 wherein said modulating
2 step includes phase shift keying of said optical pulses in a PSK
3 modulator.

1 11. (Cancelled) The invention defined in claim 9 wherein said modulating
2 step includes modulating said optical pulses in accordance with the
3 differences between successive bits in the said input data.

1 12. (Previously presented) A method for transmitting input data using an
2 optical communication system, said method comprising the steps of

Appl.No. 09/990,965
Amdt. Dated May 30, 2006
Reply to Office Action of February 27, 2006

3 generating first and second streams of RZ optical pulses in which
4 pulses in said first stream have essentially orthogonal
5 polarizations with respect to pulses in said second stream, and
6 modulating the phase of said optical pulses in said first and second
7 streams as a function of first and second streams of input data,
8 respectively, thereby encoding said first and second streams of
9 input data onto first and second streams of RZ optical pulses,
10 wherein said modulation is in a Differential Phase Shift Keying
11 (DPSK) modulation format.

1 13. (Original) The method defined in claim 12, wherein said first and
2 second streams of optical pulses each have same first wavelength, and
3 wherein said method further includes the step of combining, in a
4 wavelength division multiplexer, the phase modulated optical pulses
5 generated in said modulation step with at least a second modulated
6 optical signal having a wavelength different from said first wavelength.

1 14. (Original) The invention defined in claim 12 wherein the said optical
2 pulses are solitons.

1 15. (Previously presented) An optical communication method for
2 transmitting at least one stream of input data from a transmitter to a
3 remote receiver, said method comprising steps of:
4 generating a stream of RZ optical pulses in which alternate ones of
5 such pulses have essentially orthogonal polarizations, and
6 modulating the phase of said pulses as a function of said input
7 data applied to said transmitter thereby encoding said input data
8 into said stream of RZ optical pulses,

Appl.No. 09/990,965
Amdt. Dated May 30, 2006
Reply to Office Action of February 27, 2006

9 wherein said modulation is in a Differential Phase Shift Keying
10 (DPSK) modulation format, and
11 transmitting the modulated optical pulses from said transmitter to
12 said remote receiver via an optical communication channel.

1 16. (Original) The invention defined in claim 15 wherein said method
2 further includes demodulating said modulated pulses received at said
3 remote receiver to recover said at least one stream of input data.
